## Project Design Phase-II Solution Requirements (Functional & Non-functional)

Date	23 October 2022
Team ID	IBM-Project-13852-1659533411
Project Name	Project – University Admit Eligibility Predictor
Maximum Marks	4 Marks

## **Functional Requirements:**

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Form Registration through Gmail
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	User Details	Submit the documents     GRE or/and TOEFL scoresheet     Curriculum Vitae (CV)     Letter of Recommendation     Statement of Purpose (SoP)
FR-4	User Requirements	<ul> <li>Upload all essential documents to the website's appropriate location.</li> <li>The system would extract all essential data based on the uploads.</li> <li>Based on the information that was scraped, a list of every potential university for the candidate would be displayed.</li> </ul>

## **Non-functional Requirements:**

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	<ul> <li>The system doesn't require any prior technical knowledge from the user, thus even a novice user can access it.</li> <li>The user interface would prioritize recognition over recall.</li> <li>User friendly</li> <li>Pay attention to internal sources of control</li> <li>It wouldn't take long for the content to load and show (30 seconds).</li> <li>The fields in the site would be self-explanatory</li> </ul>
NFR-2	Security	<ul> <li>Only the authenticated user will be able to use the site's services.</li> <li>The database should be backed up every hour.</li> </ul>

		In the event of any error, the system ought to be able to resume regular functioning in less than an hour.
NFR-3	Reliability	<ul> <li>Due to the value of data and the potential harm that inaccurate or incomplete data could do, the system will always strive for optimum reliability.</li> <li>The system will be operational every day of the week, 24 hours a day.</li> </ul>
NFR-4	Performance	<ul> <li>The website can efficiently handle traffic by responding to requests right away.</li> <li>A 64-kbps modem connection would take no longer than 30 seconds to see this webpage (quantitatively, the mean time)</li> </ul>
NFR-5	Availability	Low data redundancy     reduced error risk, quick and effective
NFR-6	Scalability	<ul> <li>A significant number of users must be able to access the system simultaneously because an academic portal is essential to the courses that use it.</li> <li>The system will likely be most stressed during the admissions season.</li> <li>Therefore, it must be able to handle several users at once.</li> </ul>
